Progress Report

SCOPE AND PURPOSE

Our job is to redesign the existing website for the Office of Researching and Innovation at UofL. The current website had dead links, too many clicks to reach content, and many other poor out of date features. This causes frustration from the main users of the website. It also makes other Universities' websites look even better. By completing a redesign of the website, it will increase usability, efficiency, and grant revenue. It also makes UofL's website competitive with other prestigious universities. The redesign requires us to find any areas of improvements and redesign any out of date sections/features. This means implementing a new database, interface, and more. This will be accomplished by using software such as MySQL, Asana, and ASP.NET.

PROGRESS

To date, we have started brainstorming our design and wireframing software. We have updated and submitted our final business rules, entity relationship diagram, and statement of work. Lastly, we have also completed our first peer evaluations. We are now transitioning to starting the wireframes and moving on with development.

ADDITIONAL WORK

As stated in the progress section, we are starting to work on wireframing and then moving on to development. We expect this to be on its way by the start or midway of week 6. From there we'll start working on our presentation for Demo 1.

MILESTONES

Our first milestone is Demo 1. This will depict our vision of the website redesign. Demo 2 will have 75% of the project complete. This will start to showcase some of our actual development and functionality. Demo 3 will have 100% of the user functionality requirements in place. Lastly, Demo 4 will be the complete project development and design. This is our final product and solution for the UofL R&I website.

REMAINING QUESTIONS

As of now, we don't have very many questions. If anything, what specific levels of completion we should be at each week to get more of an idea of every task we should be working on so that it doesn't come up on us too quick.

EXPECTED RESULTS

We expect to effectively redesign the website for R&I. So far, we have been able to complete our assignments in a timely manner. As we move forward this week, we'll get started on how we envision the site looking and mocking it up for the eventual start of development.
